

Summary Page Insights

Customer Overview

- Total customers are **6,418**, with an overall churn count of **1,732**, resulting in a **27.0% churn rate**.
- Female customers contribute the majority of churn cases with around **64.15%** of total churners, while males contribute the remaining portion.

Age Group Analysis

- Churn rate increases with age.
- Customers aged **35–50** and **above 50** show the highest churn rates, indicating that working and older customers are more likely to leave the service.
- Customers above **50 years** have the highest customer count and churn percentage among all age groups.

Tenure Insights

- Customers with tenure greater than **24 months** show the highest churn volume.
- Churn fluctuates across tenure groups, but long-term customers still contribute significantly to churn.
- Customers with **6–12 months** tenure also show noticeable churn behavior.

Contract Type Insights

- **Month-to-Month** contract customers have the highest churn rate at around **46.5%**.
- Customers with **One-Year** and **Two-Year** contracts show much lower churn rates.
- Longer contract commitments help improve customer retention.

Internet Service Insights

- Customers using **Fiber Optic** internet have the highest churn rate at around **57.9%**.
- DSL and Cable users show comparatively lower churn rates.
- Customers without internet service have the lowest churn.

Payment Method Insights

- Customers using **Mailed Check** payment methods show the highest churn.
- Credit card users have the lowest churn percentage, indicating more stable customer retention.

Geographic Insights

- States such as **Jammu & Kashmir**, **Assam**, and **Jharkhand** have the highest churn percentages.
- Geographic analysis highlights regions where customer retention strategies should be focused.

Churn Category Insights

- The major churn reason is related to **Competitor Services**.
- Other important reasons include: Attitude issues, Dissatisfaction & Pricing concerns

Prediction Page Insights

Predicted Churn Overview

- The model predicts **388 customers** are at risk of churn.
- Total estimated revenue at risk is **44,512**.

Gender Distribution

- Predicted female churners: **255**
- Predicted male churners: **133**
- Female customers are more likely to churn according to prediction results.

Age Group Prediction

- Customers aged **35–50** and **above 50** are predicted to churn the most.
- Customers below 20 years contribute the least to predicted churn.

Marital Status

- Non-married customers have slightly higher predicted churn compared to married customers.

Payment Method Prediction

- Customers using **Credit Cards** and **Bank Withdrawals** contribute most to predicted churn volume.
- Mailed check users are fewer in count but still show churn risk.

Contract Prediction

- Most predicted churners belong to the **Month-to-Month** contract category.
- Very few customers with long-term contracts are predicted to churn.

Tenure Prediction

- Customers with tenure greater than **24 months** show the highest predicted churn count.
- Mid-tenure customers also contribute significantly to churn risk.

Geographic Prediction

- States like **Uttar Pradesh**, **Maharashtra**, and **Tamil Nadu** contain the highest number of predicted churners.
- These regions may require targeted retention campaigns and customer engagement strategies.

Service Subscription Insights

- Total services subscribed by all customers are 1,270.
- Total services not subscribed by all customers are 3,386.
- Customers using multiple or additional services generally show lower churn behavior and better retention.

Internet Type Prediction

- Customers with No Internet Service have the highest predicted churn count.
- DSL customers have the second-highest churn count.

- Fiber Optic customers also contribute significantly to churn but less than customers with no internet service in the prediction dashboard.
- This indicates that customers with limited or no service engagement are more likely to leave the company.

Overall Business Insight

- The company needs to improve overall service quality and customer support experience.
- Customer dissatisfaction and poor attitude towards customers are major factors contributing to churn.
- Competitor services are attracting a large portion of customers, indicating a need for better pricing, service reliability, and customer engagement strategies.
- Customers with month-to-month contracts, fewer subscribed services, and lower service engagement are more likely to churn.
- Encouraging customers to subscribe to additional services and improving customer support can help reduce churn and increase retention.
- Retention campaigns should focus on improving customer experience, resolving complaints quickly, and offering loyalty benefits for long-term customers.
